ACKNOWLEDGEMENT

We are thankful to Dr. C.V. Murumkar Principal of Tuljaram Chaturchand College, Baramati for making available all the required resources and co-operation in our project work.

We are thankful to Prof. Patil S.P. Head of BBA(CA) Department. Tuljaram Chaturchand College, Baramati for making available all the required resources and co-operation in our project work.

It gives us great pleasure to express gratitude to Prof. S. A. Kachare for her valuable guidance and suggestion while preparing this project.

I wish to express my sincere thanks to B.B.A(C.A) Department and all teaching and non-teaching staff. For their extraordinary help throughout period of my project. We are especially thankful to those who helped us directly-indirectly in completion of this work successfully.

1. Introduction to System

➤ Project Name – Online Notes Management System

➤ Project Description:

Online Notes Management System is a web-based notes sharing and management system which helps students and teachers to share their notes online effectively. It reduces the wasting of time in manually distributing notes to each individual. It greatly overcomes the lack of availability and converts the manual old school paperwork to a fully automated and managed online system.

Online Notes Management System allows its users to securely register and log in to their individual accounts and create, read, update, delete notes according to their needs. It provides notes to everyone in a very secure manner. Multiple users can work in this system at the same time under centralized supervision by administrator. It is a very useful notes management system for Colleges, Schools and other Institutes to manage and share their notes in a secure, efficient and effective manner.

1.2 Scope of the System

- This project has a large scope as it has the following features which help in making it easy to use, understand and modify it. It is not intended to a particular organization. This project is going to develop generic software, which can be applied by any busine organization. Moreover, it provides facility to its users. Also, the software is going to provide a huge amount of summary data:
 - Simplified Management of all notes.
 - Upload of notes.
 - Approve and disapprove notes features.
 - Admin Panel.
 - User profile management.
 - Easy to use web-based system.
 - Users can register online.
 - Notes are accessible from everywhere
 - Centralized control by administrator
 - Managed notes in a secure manner

1.3 Existing System

- No Software present at all.
- Time consumed in distributing notes to everyone individually.
- Manual Paperwork.
- Students are informed by sending mail to them manually about the notes.
- Lack of accessibility.
- Managing notes seems to be tricky

1.4 Need for New System

- There is always a need of a system that will provide the notes sharing through online notes management system.
- This system will reduce the notes sharing via some other means i.e., Gmail or social networking sites & also helps in finding notes via branch, title and subject
- This Project also helps in administrative work such as management of notes & users. Admin can also monitor notes uploaded by user and able to accept or reject notes file.
- The main purpose of this Online Notes Sharing is to allow students share their notes/documents digitally with their colleagues and teacher. This is very useful for schools or universities that are now into online class due to the Pandemic.

1.5 Proposed System

- Ease of sharing notes
- No Need to do Paper Work.
- To save the environment by using paper free work.
- To increase the efficiency of the notes.
- Management of all notes.
- Easy and secure user log in and registration.
- Department based notes management.
- All users can upload and share study notes with other users.
- Users can upload notes in the pdf, doc, ppt, zip, txt, etc. file format.
- Administrator or management can manage users and notes.

1.6 Hardware and Software Requirement

Hardware Requirements:

- Intel I3 2.8 GHz Processor and Above
- RAM 1 GB and Above
- HDD 20 GB Hard Disk Space and Above
- Operative Memory required for the software – 150 MB

Software Requirements:

- Operating System WINDOWS OS (Windows 7, 8,10,11) Or Linux
- Backend PHP 5.3 or higher recommended
- XAMPP Server for Windows (Apache)
- Database MySQL for Backend.
- Language/s Used: HTML, CSS, JAVASCRIPT, PHP, Bootstrap

2. Analysis & Design

System Analysis :

- Multiple user access: Allows multiple type users (teachers/student/admin) to login
- Functional Admin panel: Allows admins to manage the whole system
- CRUD functionalities: Allows all users to create, read, update and delete their notes in a managed format
- Profile update option: Allows users to update their profile/account details
- Secure registration and login option for users
- Allows students and teachers to download/upload their course notes easily

3. Feasibility Study

The feasibility study helps to know whether the system implemented is economically viable and beneficial to the organization.

TECHNICAL FEASIBILITY:-

- The system ensures accuracy, reliability and ease of data retrieval.
- The platform will be portable enough to work on any of the platforms and operating environment.
- The system will be efficient in its performance. Performance could be the speed and the memory required for the system.

ECONOMICAL FEASIBILITY:-

- The hardware used for the system will estimate budget of the project. . The cost incurred to modify the system will be minimized.
- Manpower to work on the system will be reduced.

OPERATIONAL FEASIBILITY:-

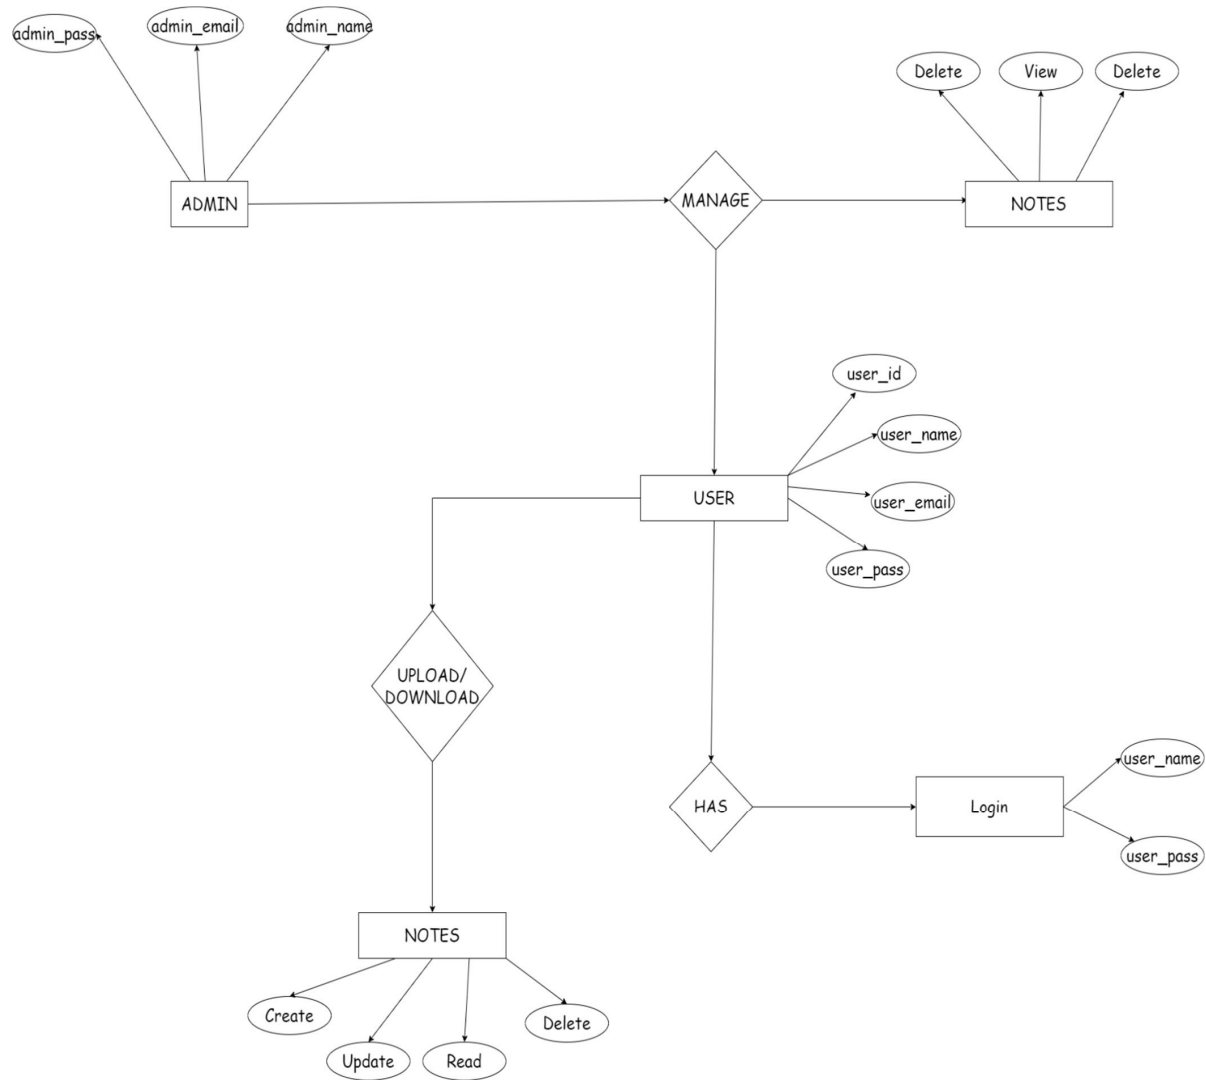

- The system will be beneficial only when it will meet organization's operating requirements.
- The system will be easy to use.
- It will have proper Human Engineering Techniques. The look and feel of the system will be user friendly and be easily understood by the user.

OBSERVATION:-

- Observation is the method followed to conduct the designed plan structure and strategy of investigation conceived so as to find out the results. As research focuses on the discovery of ideas. In order to achieve objectives of the project data is collected from various sources.

7. Conclusion & Future Enhancement

This project has several advantages. Managing the levels of the project is pretty easy and so is storing the notes. It is easy to maintain up to date information and is cheaper to maintain. Also, manual tracking is not required.

This web application involves almost all the features of the online file sharing. The future implementation will be online help for the users and chatting with website administrator.

We can Add pagination for notes, login with Facebook, google+ option & search notes option.
